

Peer Editing for Methods Section

Choose a peer editing partner and read their methods section. Use the following questions to guide the feedback you provide: Vishnu

Criteria	Feedback
Are the participants described and how the participants were recruited explained?	Yes. The article explains that the participants that would be used in this study would be students in grades 10-12 from a specific high school that enrolled 1,500 students in total, and that the students would be recruited through convenience sampling to ensure that as many students from the school as possible would have the opportunity to participate in the research study.
Is the data collection instrument and method for collecting data explained? Is the explanation clear and easy to understand? Is the method replicable?	The method for collecting the data from the study is the use of a Google Forms questionnaire that contains 22 questions that were divided into four separate sections: questions regarding the student's demographics, questions that use 5-point Likert scales to rate specific aspects of their education, questions that ask the student "yes" or "no" to questions related to their previous research studies in the field, and finally, questions that ask the student to provide qualitative responses to specific questions. Thus, the method for data collection is readily replicable.
Are ethics addressed in the method? Is the study ethical? Does the method/study adhere to the idea, "Do No Harm" ? Is confidentiality addressed?	The ethics of this study were addressed in the article. The study received approval from the Institutional Review Board (IRB) that oversees the high school in which the study was performed. Furthermore, students were required to read and acknowledge the informed consent statement that was distributed with the questionnaire, and the study maintained the complete anonymity of each participant in the questionnaire.
How does the method align to the purpose, the research question, and the approach?	The research method that was established and utilized by Vishnu aligns to the research question and purpose of the study in that the quantitative data will allow Vishnu to provide an answer to the question of why students grade chase, and the open-ended questions will allow for further explanation of the topic.
Does the author justify their choices regarding the method, instrument, and participants?	In the article, Vishnu explains his justification of the choice of using a cross-sectional model to gather the data for the research study. Specifically, Vishnu explains that due to the constraints of the academic year, it was not possible to observe the same group of students over time. Furthermore, Vishnu justified the timing of the research study during the scheduling season within the school.

Does the author address limitations of the study?	The limitations to this research study are discussed by Vishnu in the article. The limitations of the research study include the inability to prove causation between two variables, the reliance upon self-reported data from the students, the limitations of utilizing only one high school for the study, and the relatively small number of students that were observed in the study (30 respondents).
Does the section adhere to the rubric? The rubric states, “Logically defends the alignment of a detailed, replicable research method to the purpose of the inquiry.”	The answer is yes to this question. The article does not simply state the method for data collection. Instead, the author provides a defense for each decision that was made regarding research methodology.
Does the section adhere to the conventions of academic writing?	Yes. The article does adhere to the conventions of academic writing. However, a proofread is necessary to correct typos like “mtovaition” and “polcies”.
