

Presentation (15-20 Minutes including oral defense)		
Category:	Requirements:	Plan:
Research Design	The presentation states the research question/project goal AND method AND argument, conclusion or understanding.	I will state my research question, describe the qualitative discourse analysis that will be used to analyze the nine texts that will inform my presentation, and state my main conclusion regarding how small visual artists develop a form of defensive creativity in response to algorithmic challenges.
Establish Argument	The presentation or additional scholarly work presents an argument that identifies and explains the consequences and/or implications made in the conclusion.	I will argue that the algorithms placed before small artists force them to perform visibility labor and narrow their art forms, and discuss the implications of such an occurrence in the real world.
Reflect	The presentation explains how steps in the research process led to the development of the student's personal conclusion(s).	I will discuss in my defense how my use of coding to analyze the texts led to my conclusions regarding the use of defensive creativity by the artists, as the vast difference in the vocabulary used between platform explainers and artist essays indicated that the algorithms were an unfair working condition for the artists.
Engage audience	A careful selection, for a targeted audience, of design , delivery or performance techniques (e.g., eye contact, vocal variety, emphatic gestures, movement), coupled with a dynamic execution of those techniques, enhances the communication of the argument.	To present my argument to the audience, I will use slides containing quotes directly from the small visual artists who wrote about their experiences with algorithmic challenges, share eye contact with the audience, and alter my vocalizations to demonstrate the contrast between the artists' content and that of the social media platforms.
Oral Defense (Panel of 3, 3-4 Questions)		
Establish argument	provides a rationale by logically explaining why the choices made during the inquiry process were	I will defend the choice of qualitative discourse analysis to my panel, as it is the most appropriate methodology for deriving an understanding of the creators' thoughts on the algorithms, and I will explain the reason for

	appropriate.	excluding paywalled content from this research for ethical and replicable considerations.
Establish argument	provides specific details to address the question posed and describes the relationship of those details to the new understanding.	I will memorize specific details from the texts used in this research, such as Saturno's blog post detailing how their product video lost all its viewers to the algorithm, to answer questions from the defense panel.
Reflect	provides an explanation of how the project or process, in the context of the question posed, is significant for the student's own understanding, self-awareness, or personal learning.	I will discuss in my defense how this research impacted me as the researcher, as I moved from being unaware of the impacts of algorithms on creators to understanding that they force alterations to the creators' entire forms of art, and how I learned to code for objectivity despite my sentimental connection with the artists.
